PROFESSIONAL SUMMARY

Driven Artificial Intelligence & Machine Learning student with a strong foundation in full-stack development, cloud architecture, and predictive modeling. Experienced in developing scalable web applications, engineering robust APIs, and applying machine learning algorithms (including logistic and polynomial regression) to solve real-world problems. Passionate about leveraging AI, cloud services, and embedded systems to build secure, data-driven, and efficient solutions.

EDUCATION

Keshav Memorial Institute of Technology (KMIT), Hyderabad
Bachelor of Technology (B.Tech), Artificial Intelligence & Machine Learning
2024 – Present | Second Year

TECHNICAL SKILLS

Ai Models: Machine Learning Models, Deep Learning Models
Programming Languages: Python, Java, C, C++, JavaScript
Web & Backend Development: Flask, RESTful APIs, HTML/CSS
Cloud & Deployment: AWS (S3, EC2, Rekognition, Cognito), Cloudflare, Netlify, Render
Databases: SQL, MongoDB
Tools & Hardware: Git, GitHub, Raspberry Pi,
API Integrations: Gemini, , EmailJS, WhatsApp/RCS APIs

TECHNICAL PROJECTS

SecurePro (Online Examination & Anti-Cheating Platform) | Python, AWS (S3, Cognito), Netlify
Link: https://secure-pro-uiux-exam.netlify.app/

Developed a secure, scalable online examination system designed to maintain academic integrity during remote testing.

Configured AWS S3 for reliable frontend hosting and integrated Amazon Cognito to handle secure user authentication and access management.

Deployed the official software download and landing website using Netlify to ensure fast, reliable access for users.

RadAI (Radiology Management & Optimization) | Python, JavaScript, AWS Rekognition, Render,Netlify
Link:https://github.com/SupratheekReddy/radiology-backend
https://github.com/SupratheekReddy/radiology-frontend

Collaborated on a full-stack hospital management platform, independently building and optimizing dedicated backend and frontend microservices.

Utilized AWS Rekognition and advanced AI integrations to streamline the processing, secure handling, and analysis of medical scans, deployed via Render.

AI Smart Note-Taking Scribe | Python, Flask, Raspberry Pi
Link:https://github.com/SupratheekReddy/Ai-Smart-Note-Taking

Built an intelligent, hardware-integrated note-taking system utilizing a Raspberry Pi for localized, low-latency audio and text processing.

Designed the backend architecture using Flask to route data effectively and power automated transcription and summarization features.

Mission Sankalp | Python, HTML/JS, PWA (Service Workers)

Link:https://d3u1zez3i7lthy.cloudfront.net/login.html,github:private

Engineered a Progressive Web App (PWA) to facilitate field surveys and volunteer-led voter management, utilizing Service Workers (sw.js) for aggressive caching and optimized performance.

Developed an automated Python pipeline to extract, parse, and structure over 10,000 member records from complex PDF documents into the central directory database.

Built secure administrative dashboards and directory portals to dynamically calculate booth statistics, manage volunteer workflows, and track targeted voter insights.

Campus LAN Chat Application | Python, Flask, Networking

Developed and hosted a localized, real-time campus chat application designed to run exclusively on the college's internal network.

Configured the Flask server and troubleshooted Wi-Fi routing constraints to ensure smooth, low-latency communication between connected users.
